

Anchor cell

3D UX-Net
BTCV CT

matched Full (E_0)
vs. efficient (E_1)

Generality

Full vs. EffiDec3D across **3 backbones** (UX-Net, SwinUNETR, MedNeXt) and **3 datasets** (BTCV, MSD01, MSD08).

Does the pattern hold across architecture & modality?

END-TO-END · CAPACITY REMOVAL

Causal factor attribution

Frozen shared encoder, 2×2 grid over decoder **channel width** $\times$ **resolution stage**.

Which removed factor drives the effect?

FROZEN ENCODER · CAPACITY REMOVAL

Logic robustness

control

Depthwise-separable decoder: same channels & stages, each conv factorized (capacity preserved).

An artifact of pruning, or decoder-general?

END-TO-END · CAPACITY PRESERVATION
